Specification available from: Österreichischer Verband für Elektrotechnik (ÖVE) A-1010 Wien, Eschenbachgasse 9	IEC 61051-2-2 AT0006 Issue 1 / 2019-03
Electronic components of assessed quality in accordance with: IEC 61051-1: 2007-04 IEC 61051-2: 1991-01 IEC 61051-2 Amendment 1: 2009-05	IEC 61051-2: 1991-01
	ZINC OXIDE SURGE SUPPRESSION VARISTORS
	Multilayer Varistors High Surge CT Series (<u>C</u> hip with <u>t</u> hree-layer- termination (Ag/Ni/Sn))
k MLV0031-M	Multilayer Varistors High Surge CN Series (<u>C</u> hip n ot molded, with two- layer-termination(Ag/Pt))
	Non insulated
	Assessment level: E

NOTES

- 1 The undimensioned details do not affect the performance of the device.
- 2 The terminations are suitable for soldering.
- 3 The terminations are suitable for printing wired applications.
- 4 The terminations are rigid.

Information on the availability of components qualified to this detail specification is given in the Qualified Products List.

SECTION ONE - GENERAL DATA

1 General data

1.1 Recommended Method(s) of mounting

If not specified otherwise, the SMD Varistors shall be reflow-soldered on FR4 test boards (recommend reflow curve profile according to IEC60068-2-58, test Td2, Tpeak = 235° C - 260° C).

1.2 Dimensions, ratings and characteristics

1.2.1 Dimensions (All dimensions are in millimeters)

-	Body length:	
	B 1 1 1 1	

Body width:

-

-

Body thickness: Thickness of terminations: Isee table belowwsee table belowhsee table belowksee table below

Chip size	Vrms, max (V)	l (mm)	w (mm)	h (mm)	k(mm)
CN2220	60	5.5-6.0	4.9±0.30	3.0 max	0.41.0

1.2.2 Ratings and characteristics

Climatic category:	40/125/56
LCT/UCT (Lower/Upper category temperature) ¹⁾	-40°C/125°C
Maximum continuous a.c. voltage:	see table below
Maximum continuos d.c. voltage:	see table below
Supply voltage:	see table below
Voltage at specified current (1 mA)/Maximum Current at Vdc,max:	
- at 25°C	see table below
 if applicable, at upper category temperature: 	-
- if applicable, at °C	-
Maximum peak current:	
- for 10 pulses 8/20 μs at 2 per min:	see table below
- for 10 pulses 10/1000 μs at 1 every two min:	see table below
Class current:	see table below
Voltage at class current (protection level), Vclamp,max:	see table below
Capacitance:	see table below
Maximum temperature coefficient of the voltage at specified current	Not specified

(1) For explanation of style reference number, see clause 1.5.

1.2.3 Derating curve

Maximum continuous a.c. or d.c. voltage with temperature.

1.3 Related documents

Generic specification:

Sectional specification:

IEC Publication 61051-1: Varistors for Use in Electronic Equipment. Part 1: Generic Specification. IEC Publication 61051-2: Varistors for Use in Electronic Equipment. Part 2: Sectional Specification for Surge Suppression Varistors.

1.4 Marking

None.

1.5 Ordering information

Orders for varistors covered by this specification shall contain, in clear or in coded form, the following minimum information

<u>G*</u> <u>K2 U</u> Example <u>CN</u> <u>2220</u> <u>60</u> <u>E 2</u> CN Series code. 2220 Chip size K Varistor voltage tolerance at 1 mA: K: ± 10 % 60 Max. continuous r.m.s. voltage E2/E3 Increased energy handling capability/low clamping voltage Taping, packing options (not effecting IEC specifications). <u>G</u> Termination material (CN types only) K2 U Customer specific version

1.6 Certified records or released lots

Not required.

1.7 <u>Additional information</u> (not for inspection purposes)

The voltage indicated on the component is the maximum allowable steady state sinusoidal voltage at 50 - 60 Hz. When use is made of a supply voltage, the maximum continuous a.c. r.m.s. voltage = $1.1 \times \text{supply voltage}$. Should the varistor be subjected to voltage above the indicated voltage, it may fail by package rupture or expulsion material, causing a major problem in the equipment.

Coating information: Not applicable.

1.8 Additional or increased severities or requirements to those specified in the generic and/or sectional specification

None.

SECTION TWO – INSPECTION REQUIREMENTS

2 Inspection requirements

2.1 Procedures

2.1.1 For Qualification Approval the procedure shall be in accordance with the Sectional Specification, IEC Publication 61051-2, Sub-clause 3.2.

2.1.2 For Quality Conformance Inspection the test schedule (Table II) includes sampling, periodicity, severities and requirements. The formation of inspection lots is covered by Sub-clause 3.3.1 of the Sectional Specification.

TABLE II

- Notes 1. Sub-clause numbers of tests and performance requirements refer to the Generic Specification, IEC Publication 61051-1.
 - 2. Inspection Levels and AQL's are selected from IEC Publication 61193-2 Sampling Plans and Procedures for Inspection by Attributes.
 - 3. In this table:

D

- p = periodicity (in months)
- n = sample size
- c = acceptance criterion (permitted number of defectives)
 - = destructive
- ND = non-destructive
- IL = inspection level
- AQL = acceptable quality limit
- 4. The bump test and shock test are considered to be alternative. The detail specification shall indicate which test is to be performed.

} IEC 61193-2

- 5. Where d.c. has been applied to the varistor, the reference voltage shall be measured in the same direction.
- 6. The manufacturer shall only be required to perform one of these tests

Sub-clause number and Test (see Note 1)	D or ND	Conditions of test (see Note 1)	IL (see N	AQL	Performance requirements (see Note 1)
GROUP A INSPECTION (lot-by-lot) Sub-group A1 4.4.1 Visual examination 4.4.2 Marking	ND	Not applicable	11	1,0%	As in 4.4.1
Sub-group A2 4.5 Voltage	ND	Voltage at specified current	11	0,65 %	As specified in 1.2.2
Sub-group A3 4.4.3 Dimensions (gauging)	ND	Note: Gauging not applicable. Measuring dimensions: I, w, h	S-4	1,0%	As specified in 1.2.2
